

Expression of Interest Masters Degree Programme

Are you:

- Looking for funding opportunities in applied research?
- Interested in applying your expertise in biological, ecological, or a medical research, but unsure how these sciences use mathematics?
- Interested in completing a Masters degree?

Then read on:

- SACEMA provides research facilities and a stimulating environment in which scientists can interact to transcend disciplinary and institutional boundaries.
- All supported students have a background in quantitative research methods, and many have interdisciplinary experience.
- Students have the opportunity to work on research projects of direct relevance to public health in Africa.

The South African Centre for Epidemiological Modelling and Analysis ([SACEMA](#)) is a national DSI-NRF Centre of Excellence. Our core mission is to improve health in South Africa and across the continent through epidemiological modelling and analysis.

We offer interdisciplinary postgraduate training and a stimulating research environment.

The core of our research programme consists of four research themes within two broader research areas, i.e. biomarkers, drug targets, and diagnostics; transmission dynamics and interventions.

- Bursaries and scholarships are funded by the DSI and administered by the NRF.
- Shortlisted candidates would be:
 - aligned with a SACEMA-affiliated supervisor and a project that falls within one of our research themes.
 - required to apply for funding on the NRF online application system using a unique NRF funding code*.
 - required to apply to study at the agreed South African university for the duration of the masters degree (2 years).

*Submission of your application does not automatically qualify you for funding
